

Stop the Insanity!

*You can wind toroids like a Pro!
Here is how to do it...*

Take one 8 year old....

and one little toroid...

and a piece of magnet wire....

a pair of cutters...

a bench vice....

and... *Ta Dah*... a Toroid Easy toroid winding aid.

Load the toroid into the Toroid Easy tool....

And clamp it into your bench vice. Now you have two free hands to wind the toroid!

Wind the number of turns desired...

**Now you can 'unload' the toroid
from the Toroid Easy tool...**

Cut the excess magnet wire to the desired length.

'Dress' up the windings by spacing them out evenly around the toroid.

And there you have it!

Congratulations, Katie-Lydia Grace Quinn Harper! You have successively wound your toroid!

And you friends...YOU can also wind toroids like this 8 year old. Simply pick up a Toroid Easy toroid winding tool from QRPme.

The Preparation T Kit from QRPme and AC5UR

The Preparation T kit includes 10 each of T37-2, T37-6, FT37-43, T50-2 and T50-6 toroids. The kit also includes the Toroid EZ toroid winding tool which securely holds T37 or T50 toroids for hassle free winding. The toroids and Toroid EZ tool come sealed inside a factory fresh tuna fish can for easy storage and locating.
